

Ritham ERP – Project Analysis Report (Version 1.0)

Project Overview

Project Name

Ritham ERP

Industry

Tailoring • Boutique • Garment Manufacturing

Vision

Ritham ERP is a production-centric ERP designed specifically for tailoring and garment manufacturing businesses. The system manages the complete lifecycle of a customer order—from order booking to final delivery—while tracking every production stage, responsible employee, and material usage.

Unlike traditional ERPs, **the Order is the core business entity**, and every workflow revolves around the **Order ID**.

Core Design Principles

1. Order-Centric Architecture

The entire ERP revolves around **Order ID**.

- Customer → Creates Orders
 - Every production activity belongs to an Order
 - Payments belong to an Order
 - Delivery belongs to an Order
-

2. Minimal Customer Database

Customer information is intentionally simple.

Field	Description
Customer Name	Required
Mobile Number	Primary Key

No unnecessary information like address, email, gender, DOB, etc.

3. Mobile First Production

Production employees should never require a desktop.

Everything from production updates to task completion should be possible using a mobile phone or tablet.

4. Centralized Monitoring

Management should be able to monitor the complete business from one dashboard.

Business Workflow

Customer Module

Customer Table

Only two fields are maintained.

Field	Type
Customer Mobile	Primary Key
Customer Name	Required

Mobile Number

The mobile number acts as:

- Primary Key
- Business Identifier
- Search Key
- Customer History Lookup

Searching the mobile number immediately displays:

- Customer Name
 - Previous Orders
 - Saved Measurements
 - Pending Payments
 - Completed Orders
 - Delivery History
-

Database Architecture

Customer

customer

customer_mobile (PK)

customer_name

One Customer

↓

Many Orders

Customer Order

customer_order

order_id (PK)

customer_mobile (FK)

order_date

delivery_date

status

payment_status

Relationship

Customer

(customer_mobile)

|

Customer Order

(order_id)

One customer can place unlimited orders.

Production Philosophy

Production is **never linked directly to Customer.**

Everything inside production references only:

Order ID

This allows:

- Multiple orders for the same customer
 - Independent production tracking
 - Independent payment tracking
 - Independent delivery tracking
-

Production Workflow

Order Created

Design

Measurements

Material Procurement

Company Material

Customer Material

Cutting

Stitching

In-House Stitching

Outsourced Stitching

Hemming

Quality Check

Ironing

Finishing

Packing

▼
Payment Collection

▼
Delivery

Every stage is completed independently and recorded in production history.

Production Tracking

Each stage stores the following information.

Field
Order ID
Production Stage
Employee ID
Assigned Date
Start Time
End Time
Status
Remarks
Images (Optional)

Example

Order ID:

ORD-1005

Stage:

Cutting

Employee:

EMP005

Start:

09:15 AM

End:

11:20 AM

Status:

Completed

Dashboard Architecture

Ritham ERP contains three specialized dashboards.

Dashboard 1

Order Taking Dashboard

Devices

Desktop Only

Users

- Reception
- Front Desk
- Sales Executive

Responsibilities

Customer

- Search Customer by Mobile Number
- Create Customer

Orders

- Create Order
- Edit Order
- View Order History

Production Information

- Material Selection
 - Company Material
 - Customer Material
- Design Details
- Measurements

Payment

- Advance Payment
- Final Payment
- Payment Method
 - Cash
 - Google Pay
 - UPI
 - Bank Transfer

Delivery

- Delivery Date
- Print Receipt
- Mark Order Delivered

Purpose

Fast keyboard-based order entry using a desktop and printer.

Dashboard 2

Production Dashboard

Devices

- Mobile
- Tablet

Users

- Designers
- Measurement Team
- Cutting Team
- Tailors
- QC Team
- Ironing Team
- Packing Team

Responsibilities

Each employee only sees:

- Assigned Orders
- Assigned Tasks

Production stages include:

- Design
- Measurements
- Material Procurement
- Cutting
- Stitching
 - In-House
 - Outsourced
- Hemming
- Quality Check
- Ironing
- Finishing
- Packing

Each update records:

- Employee ID
- Start Time
- End Time
- Status
- Remarks
- Images

Employees cannot:

- View reports
- Edit completed stages
- Access management settings

Purpose:

Simple, fast, mobile-first production updates.

Dashboard 3

Operations Dashboard

Devices

- Desktop
- Laptop
- Tablet
- Mobile

Users

- Owner
- Operations Manager
- Administrator

Responsibilities

Employee Management

- Add Employee
 - Edit Employee
 - Assign Department
 - Activate / Deactivate Employee
-

Order Monitoring

- New Orders
 - Pending Orders
 - Orders in Production
 - Ready for Delivery
 - Delivered Orders
 - Delayed Orders
-

Production Monitoring

- Live Production Status
 - Stage-wise Progress
 - Employee Productivity
 - Bottleneck Monitoring
-

Inventory

- Company Material Stock
 - Material Purchases
 - Low Stock Alerts
-

Reports

- Daily Orders
 - Monthly Orders
 - Sales
 - Payments
 - Deliveries
 - Employee Performance
-

Device Strategy

Desktop

Used only for order booking.

Reason:

- Keyboard
 - Mouse
 - Receipt Printing
 - Faster data entry
-

Tablet

Primary production device.

Suitable for supervisors and workshop staff.

Mobile

Used directly on the production floor.

Employees update production immediately after completing each stage.

Operations Dashboard

Accessible from all devices.

Managers can monitor the business remotely.

User Roles

Reception

Production Employee

Operations Manager

Administrator

Future roles can be added without changing the architecture.

Data Relationships

Customer

(customer_mobile)

Customer Order

(order_id)

Every module references **Order ID**, ensuring complete traceability from order creation to delivery.

UI/UX Philosophy

- Minimalist Black & White Interface
 - Touch-friendly production screens
 - Large typography and spacing
 - Monochrome design with color used only for status indicators
 - Fast navigation with minimal clicks
 - Real-time production updates
 - Clean enterprise-grade appearance
-

Future Roadmap

Phase 1 – Core ERP

- Customer Management
- Order Management
- Design Management
- Measurement Management
- Production Tracking
- Payment Management
- Delivery Management

Phase 2 – Business Operations

- Inventory Management
- Supplier Management
- Purchase Management
- Barcode / QR Code Tracking
- SMS & WhatsApp Notifications
- Invoice Generation

Phase 3 – Enterprise Features

- Multi-Branch Support
 - Analytics Dashboard
 - Employee KPI Tracking
 - Expense Management
 - Accounting Integration
 - Advanced Role-Based Access Control (RBAC)
-

Overall Architecture
